

NATIONAL SEMINAR on useRs

Date : 8 October 2016
Venue : Al-Farabi Seminar Room,
Institute for Mathematical Research
Universiti Putra Malaysia

Introduction to R

R is a language and environment for statistical computing and graphics. It is a GNU project which is similar to the S language and environment which was developed at Bell Laboratories (formerly AT&T, now Lucent Technologies) by John Chambers and colleagues. R can be considered as a different implementation of S. There are some important differences, but much code written for S runs unaltered under R.

One of R's strengths is the ease with which well-designed publication-quality plots can be produced, including mathematical symbols and formulae where needed. Great care has been taken over the defaults for the minor design choices in graphics, but the user retains full control.

2. Prof. Madya Dr. Mahendran Shitan (UPM)
